

MZx is the evolution of the popular Celette dedicated MZ+ and Jig. This is most advanced change to date in manufacturing technology for the structural collision repair industry.

- Super light, around 40 lbs. per set and strong enough for every vehicle collision repair.
- Same high accuracy as steel jigs at a fraction of the weight.
- Requested and 3D printed on demand for most vehicles in the Celette fixture bank since the 1950's.
- Reach difficult mounting areas where other systems fall-short.
- Can be used with other Celette positioning technologies (MZ+, Cameleon, Naja holding device)

Only available using online ordering on www.celettejig.com
